REGULATORY OVERVIEW

1. Please give a brief overview of the regulatory framework for medicinal products/pharmaceutical products/drugs (as they are called in your jurisdiction), including the key legislation and regulatory authorities.

The Public Health Code (PHC) strictly regulates the manufacture, distribution and sale of pharmaceutical products. The Social Security Code regulates price-fixing and product reimbursement rates (total or partial) by the French healthcare system.

Pharmaceutical products are supervised by the French Agency for the Safety of Health Products (*Agence Française de Sécurité Sanitaire des Produits de Santé*) (AFSSAPS) (see box, *The regulatory authority*), which is the regulatory body designated to control healthcare entities. Pharmaceutical products can be placed on the French market provided they have been granted marketing authorisation either by the:

- AFSSAPS under the national procedure.
- European Medicines Agency (EMA) under the centralised procedure (PHC). The centralised procedure is compulsory for (*Regulation (EC) No. 726/2004 on the authorisation and supervision of medicinal products and establishing a European Medicines Agency (EMA Regulation)*):
 - biotechnological procedures;
 - new chemical compounds for the treatment of AIDS, cancer, neurodegenerative disorder or diabetes;
 - treatment of rare diseases.

PRICING AND STATE FUNDING

2. Please give a brief overview of the structure and funding of the national healthcare system.

The structure and funding of the national healthcare system is delegated to the Ministry of Health and various bodies, such as the AFSSAPS, the Public Health Agency (*Haute Autorité de Santé*) or the Biomedicine Agency. Social security schemes are managed by professional union representatives under government supervision.

Social security schemes are financed from specific contributions paid by employers, employees and other salaried professionals, and from other sources. The healthcare budget is adopted annually under the Social Security Financing Act. This law also

determines the government's yearly public health objectives (for example, public campaigns addressing cancer).

3. In what circumstances are the prices of medicinal products regulated?

In principle, the price of pharmaceutical products is freely determined by pharmaceutical companies (apart from in the case of products that are prescription-only medicines and/or are reimbursed by social security schemes). The price of these products is determined after negotiations between the pharmaceutical company and the Economic Committee for Health Products (*Comité économique des produits de santé*), acting under the supervision of the Ministry of Health. If no agreement can be reached, the price is determined unilaterally by the Committee. The applicable rate for reimbursement by social security schemes is also determined by public authorities (see *Question 4*).

4. When is the cost of a medicinal product funded or reimbursed by the state? Please briefly outline the procedure and pricing for state funding or reimbursement (for example, is the reimbursement paid to the producer, pharmacist or end-user)?

For reimbursement by social security schemes, pharmaceutical products have to meet a certain degree of efficacy (*Amélioration du Service Rendu*) and must be registered on a specific list of products. The reimbursement rate for each product is evaluated by the Transparency Commission (*Commission de la Transparence*) under the supervision of the Ministry of Health. The reimbursement rate depends on the product's efficacy improvement (as compared to therapies which are already available) and is applied to the price of the product (from 15% to 65%, or in certain circumstances 100%).

The application for the product to be registered on the list is filed with the Ministry of Health and a copy of the application is sent to the Transparency Commission for its opinion. The decision must be made within 180 days of receiving the completed application.

In principle, pharmaceutical product users are reimbursed, as they pay directly for the products. However, in recent years, French authorities have set up a new system under which the reimbursed price is advanced by pharmacies, which are then reimbursed by social security schemes (*tiers payant*).

Since 2008, annual franchises, whose final cost is borne by patients, have been implemented for certain categories of products. Patients must pay a fixed amount each time they are prescribed the relevant products (except if they have been admitted to hospital).

MANUFACTURING

5. Please give an overview of the authorisation process to manufacture medicinal products. In particular:

- To which authority must the application be made?
- What conditions must be met to obtain authorisation?
- Are there specific restrictions on foreign applicants?
- What are the key stages and timing?
- What fee must be paid?
- How long does authorisation last and what is the renewal procedure?

Application

Prior authorisation must be obtained to manufacture pharmaceutical products. Each manufacturing site must be AFSSAPS authorised and any variation of an authorised site, technical equipment or the nature of the manufactured products or process must also be authorised. Changes concerning the authorisation holder (corporate name or corporate form) or transfer of the authorised establishment to a new owner must be declared to the AFSSAPS.

Conditions

Any pharmaceutical establishment that manufactures pharmaceutical products must both:

- Meet regulated quality and safety conditions, and good manufacturing practices (GMP).
- Have a qualified pharmacist as head pharmacist (*pharmacien responsable*) involved in its management.

Restrictions on foreign applicants

There are no specific restrictions.

Key stages and timing

Manufacturing authorisation is subject to the opinion of the relevant professional board of pharmacists and to an investigation performed by AFSSAPS inspectors. The decision must be given within 90 days of receipt of the application.

Fee

Initial authorisation is not subject to a fee.

Period of authorisation and renewals

Manufacturing authorisation is not subject to a time limit. However, as mentioned above (*see above, Application*), any modifications to one of the elements on which the authorisation is based requires new authorisation. In addition, periodic inspections are performed by the AFSSAPS to enforce compliance with the terms of the authorisation.

6. What powers does the regulator have to:

- Monitor compliance with manufacturing authorisations?
- Impose penalties for a breach of a manufacturing authorisation?

AFSSAPS inspectors can perform periodic inspections to force the pharmaceutical establishment's activities to comply with the

terms of the authorisation and PHC requirements. In addition, they ensure pharmaceutical establishments apply GMP. Inspectors can take and analyse samples of manufactured products, and are entitled to seize products if granted authorisation by a judicial power.

After the AFSSAPS inspection, a specific report is issued. If any breach of a manufacturing authorisation or non-conformity with applicable regulations is discovered, the AFSSAPS can require the establishment to provide justifications and/or to carry out corrective measures. The AFSSAPS can also suspend authorisation until compliance with requirements has been reached. In addition, criminal prosecutions can be pursued. Any breach of regulations is punished by a fine of EUR3,750 (about US\$5,480) or EUR18,750 (about US\$27,420) if a legal entity is held responsible.

CLINICAL TRIALS

7. Please give an overview of the regulation of clinical trials. In particular:

- Which legislation and regulatory authorities regulate clinical trials?
- What authorisations are required and how is authorisation obtained?
- What consent is required from trial subjects and how must it be obtained?
- What other conditions must be met before the trial can start (for example, the requirement for a sponsor and insurance cover)?
- What are the procedural requirements for the conduct of the trial (for example, using certain medical practices and reporting requirements)?

Legislation

Clinical trials are strictly regulated by specific legislation. Directive 2001/20/EC on the conduct of clinical trials (Clinical Trials Directive) was implemented in France by Law no. 2004-806 on 9 August 2004 and by Decree no. 2006-477 on 26 April 2006. In addition, any clinical trials performed must comply with good clinical practices implemented by the decree.

Authorisation

All clinical trials must be submitted to the relevant public ethic committees (*Comité de protection des personnes*) and receive a favourable opinion. In addition, the clinical trial must then be authorised by the AFSSAPS. Application for an opinion and for authorisation is filed by the sponsor of the clinical trial. Review of the application by the AFSSAPS cannot exceed a time period of 60 days from the date of receipt. If there is no response on expiry of the 60 days, authorisation is considered granted.

Consent

In general, risks to subjects of clinical trials must not be disproportionate to the potential benefit of the scientific research. Informed consent of any person involved in the trial must be obtained before participation. PHC requires certain information to be communicated to the subject, such as the:

- Purpose of the trial and the procedures to be followed.
- Foreseeable risks that could arise from the trial.
- Reasonably expected benefits.

In addition, the written consent form must be revised when new important information becomes available that may be relevant to the subject's consent.

Other conditions

Certain other conditions must be met before the clinical trial begins. By law, the sponsor must ensure adequate compensation for all damages or injuries arising from the performance of the trial. In this respect, the sponsor must obtain insurance to cover its civil liability before the clinical trial begins. In addition, if the site where the trial is expected to be performed is not usually used for the healthcare activities envisaged by the trial, the site must be authorised by the AFSSAPS.

Procedural requirements

The sponsor must notify the relevant ethics committees of all information regarding serious adverse drug reactions and must report all adverse reactions to the committees and to the AFSSAPS. At the end of the trial and within 90 days from its termination, the sponsor must notify the AFSSAPS and the relevant ethics committees of the effective date of termination of the trial. In addition, within one year from the termination or suspension of the trial, a final report of the research, including its results, must be sent to the AFSSAPS.

MARKETING

8. Please give an overview of the authorisation process to market medicinal products. In particular:

- To which authority must the application be made?
- What conditions must be met to obtain authorisation?
- What are the key stages and timing?
- What fee must be paid?
- How long does authorisation last and what is the renewal procedure?

Application

Every pharmaceutical product must be granted French or centralised marketing authorisation before it is placed on the market. The AFSSAPS grants marketing authorisations. After the marketing authorisation has been granted, the authorisation holder must inform the AFSSAPS of the actual marketing of the product. Any modification of the terms of the marketing authorisation must be approved by the AFSSAPS. Any person placing products on the market that have not been duly granted marketing authorisation may incur criminal sanctions of:

- Up to two years' imprisonment.
- A fine of up to EUR30,000 (about US\$43,870) for individuals.
- A fine of up to EUR150,000 (US\$219,360) for legal entities.

Conditions

To be granted marketing authorisation, all pharmaceutical products must meet certain conditions of quality, safety and efficacy as shown by the applicant. The authorisation cannot be granted by the AFSSAPS if either the:

- Risk-benefit balance is not considered favourable.
- Therapeutic efficacy of the product is insufficiently substantiated by the applicant.

Key stages and timing

The application for marketing authorisation is filed by the pharmaceutical company and submitted to the AFSSAPS. The application must contain all required administrative information and scientific information regarding the product (that is, the information listed in the summary of the product's characteristics and in particular the qualitative and quantitative composition of the product). The application is assessed by an expert called a *rapporteur*, who advises an expert commission (*Commission d'autorisation de mise sur le marché*) on the application. During its review of the application, the AFSSAPS can order any inspection, survey or test it considers necessary. The decision is made within 120 days from receipt of the completed application.

Fee

The application is subject to a progressive fee, collected by the AFSSAPS, that cannot exceed EUR25,400 (about US\$37,140). In addition, each authorised pharmaceutical product is subject to an annual tax that cannot exceed EUR26,000 (about US\$38,020), also collected by the AFSSAPS. The tax is calculated on the amount of sales of each pharmaceutical product in the preceding financial year, excluding export sales.

Period of authorisation and renewals

Marketing authorisation is granted for five years. It can then be renewed for an unlimited period of time (unless the AFSSAPS considers that additional monitoring is necessary). Renewal is subject to assessment that no modification has been made to the elements in the first application. In addition, the pharmaceutical establishment must adapt the manufacturing and safety of its authorised product to the latest scientific knowledge. If there is no response at the end of the authorisation period, the renewal is considered approved.

If the product has not been marketed during a full three-year period, the corresponding marketing authorisation is automatically withdrawn.

9. Please briefly outline the abridged procedure for obtaining marketing authorisations for medicinal products. In particular:

- Which medicinal products can benefit from the abridged procedure (for example, generics)?
- What conditions must be met?
- What procedure applies and what information can the applicant rely on?

The AFSSAPS can grant marketing authorisations through an abridged procedure. Under this abridged procedure, the applicant is exempt from providing the pharmacological, toxicological

and clinical data to the AFSSAPS. The abridged procedure can be used for the following pharmaceutical products:

- Generics of authorised pharmaceutical products, provided the authorisation holder for the reference medicinal product consents to the use of data and information contained in the reference product's file.
- Those with well-established medicinal use, with efficacy recognised by detailed scientific literature.
- Generics of a pharmaceutical product authorised for no less than ten years in France or another EU member state.

Under French law, a pharmaceutical product is deemed to be the generic of another product if it has the same qualitative and quantitative composition in active substances, the same pharmaceutical form, and its bioequivalence with the reference medicinal product has been shown by appropriate bioavailability studies. If reference is made to a generic product, the applicant can rely on the documentation provided by the reference product holder for the reference product marketing authorisation if the:

- Holder has consented to such reference.
- Protection time period for the documentation provided for the reference product marketing authorisation has expired.

The period of time required for establishing "well-established medicinal use" must not be less than ten years from the first use of that substance as a medicinal product in the EC (*Directive 2001/83/EC on the Community code relating to medicinal products for human use (Code for Human Medicines Directive)*). If reference is made to a well-established medicinal use, the documents submitted by the applicant must refer to all relevant literature, taking into account pre- and post-marketing studies and published scientific literature.

10. Are foreign marketing authorisations recognised in your jurisdiction? If so, please briefly outline the recognition procedure.

The mutual recognition procedure allows marketing authorisations granted in other EU member states to be recognised in France. Under this procedure, the marketing authorisation holder can submit an application to the AFSSAPS for the pharmaceutical product's approval in France. The holder must inform the member state that has issued the authorisation (reference member state) of this application, and the reference member state must forward the assessment report to the concerned member states. Within 90 days of receipt of the assessment report, the concerned member states must either:

- Recognise the decision of the other member state.
- Consider that the medicinal product may present a risk to public health.

If required, a conciliation procedure can be initiated before the EMEA.

In addition, Directive 2004/27/EC on the Community code relating to medicinal products for human use (Code for Human Medicines Second Amendment Directive) established a new decentralised procedure for simultaneous applications in the EC. These provisions were transposed into French law in December 2007.

11. What powers does the regulator have to:

- Monitor compliance with marketing authorisations?
- Impose penalties for a breach of a marketing authorisation?

The AFSSAPS can monitor compliance with marketing authorisations with periodic inspections and surveys at any pharmaceutical site. AFSSAPS inspectors are authorised to take and analyse samples of manufactured products and can seize products if granted authorisation by a judicial power.

For breach of a marketing authorisation, the AFSSAPS can require justifications and corrective measures from the marketing authorisation holder. The marketing authorisation holder has the right to defend itself by following a written appeals procedure. If the holder does not remedy the breach or the AFSSAPS still believes it is not complying, the AFSSAPS can either:

- Suspend marketing authorisation for up to one year.
- Withdraw the authorisation.

12. Are parallel imports of medicinal products into your jurisdiction allowed? If so, please briefly outline what conditions must be met by the parallel importer. Can intellectual property rights be used to oppose parallel imports?

Parallel imports (that is, distributing pharmaceutical products outside the manufacturer's official channels) are permitted under the PHC, but are subject to a five-year authorisation granted by the AFSSAPS. The authorisation is granted provided the:

- Product has been granted marketing authorisation in France.
- Qualitative and quantitative composition of active substances, and the pharmaceutical form and therapeutic effects of the imported products, are identical to those of the authorised product.

Authorisation can be refused for public health reasons, but not for intellectual property rights reasons. Under the principle of exhaustion of the rights conferred by a patent or trade mark (*épuisement des droits*), the holder of an intellectual property right protected by law cannot rely on that right to prevent the import of a product that has been marketed in another EU member state by the holder itself (or with its consent). For trade marks, however, this principle does not apply if there are legitimate reasons for the holder to oppose further commercialisation of the product, especially where the nature of the product has been changed or impaired after being put on the market.

13. Please briefly outline the restrictions on marketing practices such as gifts or "incentive schemes" for healthcare establishments or individual medical practitioners.

Pharmaceutical companies that produce or market products or services reimbursed by social security schemes are prohibited from granting free advantages, directly or indirectly, to healthcare

professionals (*Article L. 4113-6, PHC*). However, pharmaceutical companies can provide advantages or compensation to healthcare professionals in the form of:

- Advantages granted in the context of research and scientific evaluation activities.
- Hospitality offered in the context of scientific or promotional congresses.
- Reasonable compensation for services performed by the healthcare professionals.

Any advantage or compensation granted under these exceptions must be provided for in a written contract submitted to the relevant professional bodies for review and opinion.

The distribution of free samples is also limited. Pharmaceutical companies can provide free samples to healthcare professionals on request only, and the number of samples is limited to ten samples of a given product per professional per year.

Gifts or donations to a medical institution to finance research activities or training of healthcare professionals are acceptable provided that the pharmaceutical company makes a specific declaration to the *Préfecture*, and these gifts or donations do not provide any individual advantage to healthcare professionals (that is, they are intended for collective use only).

Charitable donations do not need to be declared to the *Préfecture*.

14. Please briefly outline the restrictions on marketing medicinal products on the internet, by e-mail and by mail order.

PHC does not provide any specific prohibition on marketing medicinal products authorised in France through the internet. However, general regulations governing pharmaceutical activities restrict mail delivery. Only pharmacists are allowed to sell pharmaceutical products and only in their pharmacies. In addition, pharmacists must give customer advice.

ADVERTISING

15. Please briefly outline the restrictions on advertising medicinal products. In particular:

- Which legislation applies and which regulatory authority enforces it?
 - What types of medicinal product cannot be advertised?
 - What restrictions apply to advertising that is allowed?
-

Medicinal product advertising in France is governed by the following:

- Code for Human Medicines Directive.
- Provisions of the PHC concerning promotion of pharmaceutical products.
- Guidelines issued by the AFSSAPS.

Although the AFSSAPS guidelines are not legally binding, French courts consider they must be taken into account by pharmaceutical companies.

Advertising for medicinal products must strictly comply with the product's marketing authorisation. The PHC distinguishes between advertising directed to the general public and advertising directed to healthcare professionals. In general, advertising directed at the general public is not allowed if the product is subject to prescription or is reimbursed by social security. Advertising directed at the general public is allowed for other medicinal products, provided prior authorisation has been granted by the AFSSAPS.

All medicinal product advertising must contain objective information and be consistent with appropriate use (*bon usage*) of the product. More specifically, advertising directed at healthcare professionals must contain both:

- Legal information set out in Article R. 5122-9 of the PHC.
- All relevant information for professionals to form their own opinion of the therapeutic worth of the product.

The information must be accurate, up to date, verifiable and exhaustive. The price of the product (if determined by the authorities), the daily cost of the treatment and its reimbursement by social security schemes must be mentioned in any promotional material directed at healthcare professionals. Violations of mandatory provisions governing advertising of medicinal products may entail criminal penalties of:

- Up to two years' imprisonment.
- Fines of up to EUR30,000 (about US\$43,870) or EUR37,500 (about US\$54,840) for individuals.
- Fines of up to EUR150,000 (about US\$219,360) or EUR187,500 (about US\$274,190) for legal entities.

PACKAGING AND LABELLING

16. Please briefly outline the regulation of packaging and labelling of medicinal products. In particular:

- Which legislation applies and which regulatory authority enforces it?
 - What information must the packaging and/or labelling contain?
 - What other conditions must be met (for example, information being stated in the language of your jurisdiction)?
-

The packaging and labelling of pharmaceutical products is subject to specific regulations provided by the PHC (for example, Article R. 5121-137 et seq). The AFSSAPS controls compliance of pharmaceutical products' packaging and labelling.

All packages and leaflets are part of the marketing authorisation granted by the AFSSAPS. The following information must appear on, among other places, the outer packaging of pharmaceutical products:

- Name of the medicinal product.
- Qualitative and quantitative composition in relation to active substances.

- Pharmaceutical form and contents by weight.
- Route of administration.
- List of excipients.
- Expiry date.
- Special storage precautions.
- Disposal of unused medicinal products or waste materials.
- Authorisation number and manufacturing batch number.
- Special warnings.

If the required information is not on the outer packaging, it must be on the inner packaging. The information must be legible, understandable and indelible. For reimbursable medicinal products, the outer packaging must also mention information related to price and the conditions for reimbursement by social security schemes.

The information must appear on packaging in French. Other languages can be used, provided identical information appears in all languages.

TRADITIONAL HERBAL MEDICINES

17. Please briefly outline the regulation of the manufacture and marketing of traditional herbal medicinal products in your jurisdiction.

The manufacture and marketing of traditional herbal pharmaceutical products is regulated by the PHC. Such pharmaceutical products can be authorised through the abridged procedure of marketing authorisation used for products with well-established medicinal use by means of detailed scientific literature. Directive 2004/24/EC on traditional herbal medicinal products (Traditional Herbal Medicines Directive), recently implemented in France, contains provisions to facilitate marketing of such products. Certain listed products can be authorised under a special and simplified registration procedure. The application for registration is made to the AFSSAPS.

PATENTS

18. What types of medicinal products and related substances and processes can be protected by patents and what types cannot be patent protected? What are the legal criteria to obtain a patent? Which legislation applies?

The patentability of pharmaceutical products is subject to general regulations governing patents. Any medicinal product or related substance can be patented provided conditions required by the Intellectual Property Code are met. Patentability is subject to the following conditions:

- Novelty involving an inventive step.
- Potential industrial application.

In addition, the invention must not be contrary to public order or ethics, or human dignity. Some inventions are not patentable, such as discoveries, scientific theories, mathematical methods,

aesthetic creations, games or computer programs. The human body, at various stages of its formation and development, including the embryo, is not patentable. Only inventions that combine a natural element with a technical process enabling it to be isolated or produced for an industrial application can be the subject of a patent application.

In addition, specific regulations apply to pharmaceutical products protection. As the active ingredient of a pharmaceutical product is usually patented long before its effective marketing, the parts of the patent that correspond to the authorisation can be protected for an additional period of time by a supplementary protection certificate (*certificat complémentaire de protection*) (see Question 20).

19. How is a patent obtained? In particular:

- To which authority must the application be made?
- What fee must be paid?
- What are the key stages and timing?

The authority

The application for the patent is filed with the National Institute of Industrial Property (*Institut National de la Propriété Industrielle*) (INPI).

Fee

The following fees apply:

- EUR36 (about US\$53) must be paid within one month of filing a patent application. The fees increase progressively up to EUR760 (about US\$1,110) per year for the 20th year.
- The annual fee for the supplementary certificate of protection is EUR500 (about US\$730).
- Additional fees must be paid for the review of the application by the INPI (that is, EUR500 for the search report and EUR86 (about US\$126) for granting the patent).

Process and timing

The application must contain all information relating to the invention, including:

- A description of the invention, accompanied by drawings where appropriate.
- One or more claims to define the scope of protection the inventor is applying for.
- An abstract of the technical content of the invention.

Within 18 months of the application date, the INPI must publish notification of filing of the application in the Official Bulletin of Industrial Property. This aims to ensure that third parties are informed of the patent application.

The patent is delivered after a search report (*rapport de recherche*) has been issued by the INPI. The report summarises the elements of prior art that can be taken into consideration in assessing the patentability of the invention. A reference to the patent's grant must be published in the Official Bulletin of Industrial Property, within one month of the date of its notification.

20. How long does patent protection last? How is a patent renewed or patent protection extended?

Patents are granted for a term of 20 years from the day of the application and are not renewable. However, supplementary protection certificates can be granted for pharmaceutical products. They enter into effect at the end of the statutory term of the patent, for a period of no more than seven years from the end of the patent and 17 years from issue of the marketing authorisation.

21. In what circumstances can a patent be revoked?

The granting of a patent is subject to limited investigations performed by the INPI. Once the patent has been granted, a subsequent more complete investigation can be initiated and the patent revoked in court. Any person with an interest is entitled to ask a civil court for revocation of the patent if the patent does not comply with the substantial requirements of the Intellectual Property Code (that is, the invention is not disclosed in a manner sufficiently clear and complete to be used by a person skilled in the art).

In addition, preservation of the patent is subject to payment of annual fees. If the fees are not paid, the holder has an additional six-month period to pay them, as well as a surcharge, and if they are still not paid after this period, the patent holder loses rights to the patent.

22. When is a patent infringed? How is a claim for patent infringement made and what remedies are available?

The patent gives the holder the right to prohibit direct use of the invention, in particular, manufacturing, offering, putting on the market, importing, and all indirect uses of the invention (through supplying it). Any violation of these rights is an infringement and the infringer is civilly liable. In principle, infringement proceedings must be brought by the patent holder. At the holder's request, the judge can order seizure of the infringing products and subsequent measures to stop the infringement. In addition, damages can be awarded to the patent holder.

Infringement can be a criminal offence, provided the holder can prove the counterfeiter acted dishonestly. Any breach of these rules is punishable by three months' imprisonment and a fine of EUR300,000 (about US\$438,710). If the infringing goods are considered hazardous to human health, the offence is punishable by five years' imprisonment and a fine of up to EUR500,000 (about US\$731,190).

TRADE MARKS

23. Can a medicinal product brand be registered as a trade mark? What are the legal criteria to obtain a trade mark? Which legislation applies?

The registration of pharmaceutical product brands are subject to the general regulations governing trade marks. A trade mark is defined as a sign capable of graphic representation that serves to distinguish goods or services of a natural or legal person (*Intellectual Property Code*). The PHC contains specific additional rules regarding trade marks. The name of the pharmaceutical product can be an invented name, a common name or a scientific name followed by the trade mark or the name of the manufacturer. To be accepted, the registered mark must not create any confusion with other pharmaceutical products.

The PHC contains specific additional rules regarding trade marks. The name of the pharmaceutical product can be an invented name, a common name or a scientific name followed by the trade mark or the name of the manufacturer. To be accepted, the registered mark must not create any confusion with other pharmaceutical products.

24. How is a trade mark registered? In particular:

- To which authority must the application be made?
- What fee is payable?
- What are the key stages and timing?

The authority

The application for registration of a trade mark is filed with the INPI.

Fee

The fee depends on the number of international classes of products and services for which protection is required. The initial application is subject to payment of EUR225 (about US\$330) for the first three classes, and EUR40 (about US\$58) for each additional class. No additional fee is required for continuing protection for following years.

Process and timing

Ownership of a trade mark is acquired by registration. The application must contain, in particular:

- Administrative information related to the applicant's identity.
- A sample of the item to be trade marked.
- A list of the goods and services to which it applies.

A registration number is then attributed to the application and within six weeks the INPI publishes notification of the filing in the Official Bulletin of Industrial Property. Within two months of the date of publication, any concerned person can submit observations to the Director of the INPI or lodge a formal opposition to contest the trade mark registration (for example, if the trade mark has already been registered). If it is not contested and the trade mark complies with the Intellectual Property Code, the trade mark is registered in the National Register of Marks and published in the Official Bulletin of Industrial Property.

25. How long does trade mark protection last? How is a trade mark renewed?

The effects of registration begin on the application filing date for a ten-year period. The trade mark can be renewed without limitation.

26. In what circumstances can a trade mark be revoked?

The trade mark can be revoked in the following circumstances:

- The owner of the registered trade mark can renounce the effects of the registration for all or part of the goods or services to which the trade mark applies (by a notice of renunciation).

- The registration can be declared void if it does not comply with the legal requirements.
- An owner who has not exploited his trade mark during an uninterrupted period of five years, without good reason, is liable to revocation of his rights by court order.

27. When is a registered trade mark infringed? How is a claim for trade mark infringement made and what remedies are available?

Trade mark registration provides the holder with exclusivity of use (for the goods and services designated in the application) and a right to prevent all third parties from using the mark in the course of trade without its consent.

An offender can be civilly liable for any infringement of the holder's rights. Infringement can consist of:

- Use or reproduction of an identical trade mark (for example, the use of an identical trade mark for goods or services identical to those designated for the trade mark registration).
- Use by imitation implying a risk of confusion (for example, the use of an identical trade mark for goods or services that are similar to those designated in the registration, or the use of an imitative trade mark for goods or services that are similar or identical to those designated).

The trade mark holder can pursue infringement proceedings before the civil courts, which can order the seizure of infringing products and subsequent measures to terminate the infringement. Damages can be awarded to the trade mark holder. As with patent infringement, criminal prosecution can also be pursued. Any breach of these regulations is punished by three months' imprisonment and a fine of EUR300,000 (about US\$438,710).

28. Is your jurisdiction party to international conventions on patent and trade mark protection?

France is a party to the following conventions:

- WIPO Paris Convention for the Protection of Industrial Property 1883.
- WIPO Madrid Agreement Concerning the International Registration of Marks 1891.
- WTO Agreement on Trade-Related Aspects of Intellectual Property Rights 1994 (TRIPS).
- Protocol Relating to the Madrid Agreement Concerning the International Registration of Marks 2008.
- Patent Cooperation Treaty (PCT) 2002.
- Budapest Treaty on the International Recognition of the Deposit of Microorganisms for the Purposes of Patent Procedure 1980.
- Singapore Treaty on the Law of Trademarks.
- The Nice Agreement Concerning the International Classification of Goods and Services for the Purposes of the Registration of Marks 1957.
- Strasbourg Agreement Concerning the International Patent Classification 1971.

PRODUCT LIABILITY

29. Please give an overview of medicinal product liability law, in particular:

- Under what laws can liability arise (for example, contract, tort or statute)?
 - What is the substantive test for liability?
 - Who is potentially liable for a defective product?
-

Legal provisions

Liability can arise under tort, contract and defective products liability law. Under tort law, a fault can result from an act or omission. The claimant must establish:

- A fault.
- An injury.
- A causal link between the fault and the injury.

Under contract law, a party to a contract is liable for the damage caused by the non-performance of its contractual obligations, unless it proves the non-performance resulted from an external cause. Courts have also established specific obligations, such as to deliver the product, a safety obligation, a counsel or advice obligation and a guarantee against latent defects (for example, latent defects that make the product improper for its intended use).

Defective product liability stems from Directive 85/374/EEC on liability for defective products (old Product Liability Directive), which was implemented in France by Law No. 98-389 on 19 May 1998, which established a specific defective product liability regime.

In addition, claimants can also pursue pharmaceutical companies under criminal law. A manufacturer of a dangerous product can be liable for involuntary homicide or infliction of an involuntary injury resulting in the victim's total incapacity for more than three months.

Substantive test

Under tort liability, the claimant must give evidence of an existing fault, an injury and a causal link between fault and injury. Fault can be negligence in the conception or manufacture of the product.

Under contract law, the claimant must prove either that:

- The product does not comply with the contract or was affected by a manufacturing vice or defect that made it improper for its intended use.
- Information delivered regarding the product was incomplete.

Under defective product liability, the product is considered to be defective when it does not provide the safety which a person is legitimately entitled to expect. The claimant must give evidence of the actual damage, the defect in the product and the causal link between the damage and the defect.

Liability

Under tort liability, any person can be liable provided that a fault, an injury and a direct causal link are proven. However, the manufacturer is generally liable.

Under contract law, the supplier (for example the physician, pharmacist or hospital) usually bears responsibility for the default or defect (except for safety obligations where the manufacturer can also be responsible).

Under defective product liability, the principle is that the “producer” (defined as the manufacturer of a finished product, the producer of any raw material, or the manufacturer of a component part), when acting in professional capacity, bears ultimate responsibility for the defect. In addition, if the producer remains unknown, the seller or any professional supplier is responsible for defective products under the same conditions as the manufacturer, unless it discloses the name of its supplier or producer, within three months of notification of the claimant.

30. What are the limitation periods for bringing product liability claims?

Since June 2008, the common law time limit for bringing an action in France for bodily damage or injury is ten years from the date when the cause of action arose.

A specific time period is provided for the contractual guarantee against latent defects. Liability claims must be brought within two years of discovery of the defect (*Article 1648, Civil Code*).

Under defective product liability, the limitation period is ten years after the product was put into circulation. Proceedings for damages based on defective product law are time-barred after three years from the date on which the claimant became aware or should have become aware of the damage, defect and identity of the producer.

31. What defences are available to product liability claims?

Under contract law, valid defences are that the defect or fault arose as a result of a *force majeure*, an external cause (third party action), or from the buyer's own fault. Under tort liability, the defendant must prove that the defect or fault arose as a result of external causes or the attitude of the victim (that is, fault or consent of the victim). Under defective product liability, the producer is not responsible if it can prove one of the following:

- It did not place the product into circulation.
- The defect that caused the damage did not exist at the time the product was placed into circulation or the defect arose after it was put into circulation.
- The product was not manufactured for distribution or sale.
- The state of scientific or technical knowledge at the time the product was placed into circulation was not such as to enable the discovery of the defect (except for injuries caused by pharmaceutical products using compounds from human bodies, such as blood).

THE REGULATORY AUTHORITY

French Agency for the Safety of Health Products (*Agence Française de Sécurité Sanitaire des Produits de Santé*) (AFSSAPS)

T +33 1 55 87 30 00

F +33 1 55 87 35 75

+33 1 55 87 32 84 (marketing authorisation service)

+33 1 55 87 39 41 (pharmaceutical establishments service)

W <http://afssaps.sante.fr/>

Main areas of responsibility. These include:

- Clinical trials.
 - Marketing authorisations.
 - Pharmaceutical establishment authorisations.
 - Advertising.
 - Pharmacovigilance.
 - Import and export of healthcare products.
- The defect was due to compliance of the product with mandatory provisions or regulations emanating from public authorities.

In addition, the producer of a component is not responsible if it can prove that the defect in the component is attributable to the design of, or the directions given by, the producer of the product in which the component has been fitted.

32. What remedies are available to the claimant?

Under tort and contract law, monetary damages resulting from material damage are recovered if the damage is certain, direct and foreseeable. This includes loss incurred, as well as missed gain or loss of opportunity. Damages for bodily injuries are also recoverable. Remedies for moral damages are also recoverable, but are difficult to evaluate.

Under defective product liability, compensation is limited to all damages resulting from harm to a person or goods other than the defective product itself.

33. Are class actions allowed for product liability claims? If so, are they common?

Class action procedures do not exist in France. However, registered consumer associations can bring legal proceedings before all jurisdictions for compensation for damages sustained by consumers collectively (*Article L. 421 et seq, Consumer Code*). Damages are claimed for loss sustained by the community of consumers, to the extent that such loss is distinct from losses sustained by individual consumers.

In 2006, a draft law was presented by the government on this issue. Its purpose was to maintain the mandate requirement,

while allowing consumer associations to publicly solicit such mandates, therefore favouring group actions. This new form of collective action, if adopted, would only apply to economic damages and not medical liability and bodily harm. The draft law has been abandoned but implementation of a class action in French law is again being debated.

REFORM

34. Please summarise any proposals for reform and state whether they are likely to come into force and, if so, when.

In future, regulations governing ownership of local pharmacies may be amended to allow holding of such pharmacies by non-pharmacists (to take into account EU regulations). A possibility for supermarkets to deliver non-prescription medicines is also being

heavily debated (since June 2008, some pharmaceutical products registered on a specific list are placed before the counter in local pharmacies, and can therefore be freely accessible to the public, that is, they are not actually delivered by a pharmacist).

Leaders in the life sciences industry rely on Dechert to understand their business opportunities and challenges and deliver real-world solutions.

With a distinguished trial team that includes a top-ranked product liability practice, an IP group that protects and maximises assets around the world, and a corporate finance team that advises on growth strategies, including financings, M&A and corporate partnering, we provide the resources to keep you ahead in the marketplace.

Growth strategies for deal structures and speed-to-market execution

Financing to capture and structure capital for long-term development and commercialisation

Licensing and partnering for profitable, diversified product development and distribution

Asset protection through counseling, due diligence and evaluation of IP asset strength and target opportunities

High-stakes defense when product liability and other claims threaten reputation and the going concern
